### **SPECIFICALLY DESIGNED For mission critical applications**

Self-powered camera systems designed for open and remote areas where power is a problem, too costly, impossible, too time consuming, disruptive or not viable. Powered by sustainable energy.

Individually calculated for each site, the systems offer mission critical reliability enabling a true fit & forget solution, with absolute minimal infrequent maintenance.

Available in special Pole or Mobile Trailer mounted.

## P Range

The P Range of ecovision products are available as a complete unit which include a single PTZ Dome. The P2 system includes a high resolution city centre analogue Day/Night PTZ, at lower cost than P1, powered by renewable energy. All ecovision products integrate seamlessly into any existing scheme or can be used stand alone. Recommended for areas requiring 360° plus zoom coverage that are either well lit or have some ambient lighting.

### It's not big, but it is clever.

The intelligent ecovision CCTV range works 24 hours a day, unattended and generates its own power from natural, clean, efficient renewable energy resources of wind and/or solar energy. We've done all the power consumption, wind and solar resource data and equipment calculations for you, so all you need to know is what you already know about CCTV.

### Immediate and long term savings

The ecovision product range can save thousands of pounds in unnecessary civil engineering and electrical costs that are normally associated with equivalent hardwired CCTV. No grid connection means no initial or ongoing energy or standing charges. These savings are immediate and of course the long term savings are ongoing indefinitely.

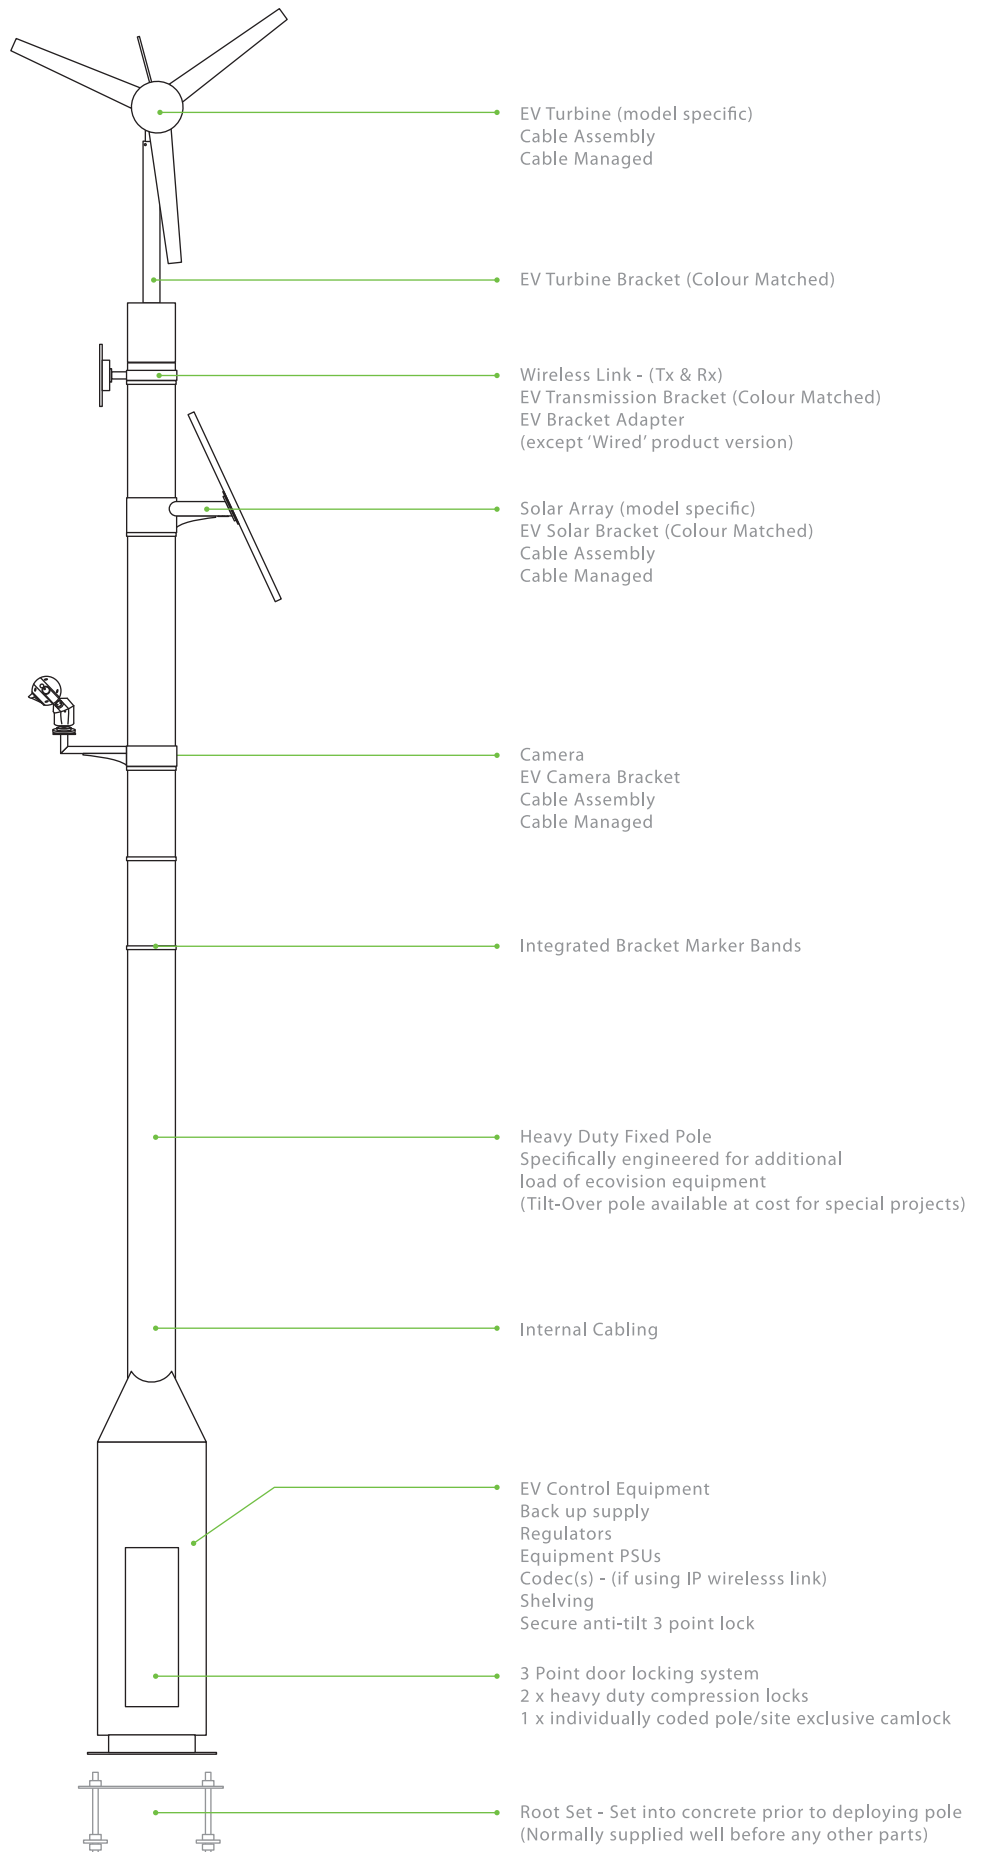

### Ecovision unplugged.

The unit is NOT powered by a generator needing top up every week, nor is it powered by backup power that needs changing every few days like other rapid deployment systems. It doesn't even run off a temporary 110V or 240V connection, so it can't be unplugged. Ecovision is totally self powered and designed specifically for mission critical applications so each system will run 24 hours a day, 7 days a week, 365 days a year with absolutely minimal infrequent maintenance

Available in various transmission versions including:

-  Wired (Fibre, Cat5/6, Coax)
-  Wireless IP
-  Wireless Digital Wave
-  Wireless 3G/HSUPA
-  Wireless Satellite Broadband

#### Restrictions

The systems in this brochure are based on UK installations. Global systems will differ due to longer or shorter sunlight hours and varying wind conditions. Every system is designed for the country in which it is installed to ensure maximum efficiency.

#### Bespoke Installations

We have extensive experience in designing and installing bespoke versions of our systems specific to our customers requirements. Examples includes solar only highway vehicle counting, radar integrated systems, remote flood risk equipment display monitoring via satellite video link and our ecovision mobile trailer version designed by request and now a mainline product, to name but a few.

#### Confidential Projects

Ecovision have been involved in various confidential projects, entering into a number of non-disclosure agreements. Our customer's confidentiality is paramount on certain projects. To discuss your own project, we can arrange for one of our technical directors or the managing director to meet with you, following normal NDA procedure.

#### Continual Improvements

Ecovision reserve the right to change the specification without notice in order to improve the product or service.
